SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Darayne Bos Examiner #: 68951 Date: 5/24/04
Art Unit: 2600 Phone Number 30 _____ Serial Number: 101781265
Mail Box Location: PL2 Y A37 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

AB - Polygonal data input in a first step is subjected to evaluation in which all edges
 of the polygon data are ranked in importance on the basis of a volume change
 caused by removal of that edge. The edges are sorted on the basis of an
 evaluation value in a third step. In a fourth step, the edge of a small evaluation
 value is determined to be an edge of a small influence on the general shape and is
 removed. In a fifth step, a new vertex is determined from the loss of vertex by the
 edge removal. In a sixth step, a movement of texture coordinates and a removal
 of the texture after the edge removal are executed on the basis of the area change
 of the texture due to the edge removal by a predetermined evaluating function. In
 a seventh step, by repeating the processes in the second to sixth steps, a polygon
 model approximated to a desired layer can be obtained.
